

This paper should address the topic below. It should be at least 5 pages, double-spaced, in length. It can be as long as you feel you need in order to answer the question. You should, whenever appropriate, include material from the Stansfield book, Course Pack, Lecture Notes, Mini-visits, and Photo-Album. You may use any additional sources you wish. Please be sure to cite your sources using MLA format. The easiest way to do this is to use Noodletools at the following site:

<http://www.necc.mass.edu/departments/library/Noodletools.htm>. You should write your answer first and then cut and paste it into the Assignment format.

You should write your answer first and then cut and paste it into the Assignment format.

Follow the following link <http://www.ncdc.noaa.gov/oa/climate/globalwarming.html>.

Using this, the materials studied this semester and two additional sources of your choosing, discuss the potential impact of global warming on three of the countries that we have studied this semester. Be sure to identify the countries and describe how life might change there. What has each of the countries done to address the possible changes? The more specific information that you include, the better you are likely to do on the assignment. Remember that you **must** use the above source. If you choose to study one of the countries on which we have read articles, you **must** include new material.

Please review the grading form before you begin working on the paper. Although the drafts are not graded, submission of a draft is worth up to 10 points on the final grade.
